Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement:

The **Automated Network Request Management in ServiceNow** project is designed to streamline and automate the processing of network-related service requests. By utilizing ServiceNow's Service Catalog, Flow Designer, approval workflows, and automation capabilities, the solution minimizes manual intervention and improves operational efficiency. Users can submit network requests through a user-friendly self-service portal, while automated workflows handle request validation, approval routing, task creation, and assignment to the appropriate support teams. Where applicable, the system can integrate with network automation tools to enable end-to-end request fulfillment with minimal human involvement. This automation reduces processing time, enhances SLA compliance, improves service quality, and provides greater visibility and transparency for both end users and IT administrators.

Aspect	Description in context of our project
 I am	 We are ServiceNow developers and IT automation enthusiasts working on building an automated network request management solution.
 I'm trying to	 Build a streamlined way for users to submit network requests and automate the entire approval, fulfillment and notification process.
 But	 Currently, the process is manual and time-consuming, leading to delays, errors, and limited visibility.
 because	 Requests are routed through emails and spreadsheets with no automation, proper tracking or SLA compliance.
 which makes	 The solution valuable by providing faster request handling, improved accuracy, better transparency, and higher user satisfaction.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
------------------------	-----------------	---------------	-----	---------	---------------------

PS-1	An employee requesting a network service	Submit a network request quickly and track its status	The approval and request process is slow and requires multiple manual steps	Requests are handled manually and lack automation	Frustrated due to delays and lack of visibility
PS-2	An IT network administrator	Process and fulfil network requests efficiently	Managing approvals , assignments, and updates manually is time-consuming	There is no automated workflow to route and manage requests	Overloaded and concerned about meeting SLA deadlines
